

1           1.    A method comprising:  
2                    aggregating information form two or more web  
3 sites; and  
4                    providing said information to a wireless device.

1           2.    The method of claim 1 including aggregating the  
2 information from two or more web sites on a processor-based  
3 system connectable to the wireless device.

1           3.    The method of claim 1 including receiving user  
2 requests for information from web sites and storing said  
3 information received from web sites.

1           4.    The method of claim 2 including establishing a  
2 telephone connection and during that connection, accessing  
3 the requested information from at least one web site.

1           5.    The method claim 4 including accessing  
2 information from at least two web sites using a single  
3 connection.

1           6.    The method of claim 1 including aggregating said  
2 information in response to the detection of an event.

1           7.    The method of claim 6 including detecting a  
2 period of low activity on said system.

1           8.    The method of claim 6 including detecting a  
2   predetermined time.

1           9.    The method of claim 1 including storing  
2   aggregated information from two or more web sites and  
3   monitoring for an event.

1           10.   The method of claim 9 including providing said  
2   information to a wireless device in response to monitoring  
3   the occurrence of an event.

1           11.   The method of claim 10 including detecting the  
2   occurrence of a predetermined time and automatically  
3   transferring information to a wireless device at the  
4   predetermined time.

1           12.   An article comprising a medium storing  
2   instructions that enable a processor-based system to:  
3                aggregate information from two or more web sites;  
4   and  
5                provide the information to a wireless device.

1           13.   The article of claim 12 further storing  
2   instructions that enable the processor-based system to

3 aggregate the information from two or more web sites for  
4 transmission to the wireless device.

1 14. The article of claim 12 further storing  
2 instructions that enable the processor-based system to  
3 receive user requests for information from web sites and  
4 store the information received from web sites.

1 15. The article of claim 13 further storing  
2 instructions that enable the processor-based system to  
3 establish a telephone connection and, during that  
4 connection, access the requested information from at least  
5 one web site.

1 16. The article of claim 15 further storing  
2 instructions that enable the processor-based system to  
3 access data from at least two web sites using a single  
4 connection.

1 17. The article of claim 12 further storing  
2 instructions that enable the processor-based system to  
3 aggregate the information in response to the detection of  
4 an event.

1        18. The article of claim 17 further storing  
2 instructions that enable the processor-based system to  
3 detect a period of low activity on said system.

1        19. The article of claim 17 further storing  
2 instructions that enable the processor-based system to  
3 detect a predetermined time.

1        20. The article of claim 12 further storing  
2 instructions that enable the processor-based system to  
3 store aggregated information from two or more web sites and  
4 monitor for an event.

1        21. The article of claim 20 further storing  
2 instructions that enable the processor-based system to  
3 provide the information to a wireless device in response to  
4 monitoring the occurrence of an event.

1        22. The article of claim 21 further storing  
2 instructions that enable the processor-based system to  
3 detect the occurrence of a predetermined time and  
4 automatically transfer web information to a wireless device  
5 at the predetermined time.

1        23. A system comprising:  
2

3           a processor; and  
4           a storage coupled to said processor, the storage  
5 storing instructions that enable the processor to aggregate  
6 information from two or more web sites and provide the  
7 information to a wireless device.

1           24. The system of claim 23 including a wireless  
2 connection connectable to the wireless device.

1           25. The system of claim 23 including an Internet  
2 connection.
